WHAT IS CLAIMED IS:

Sub B1 1. An electrical connector, comprising:

a molded plastic housing having an elongated body portion defining a front mating face and a rear terminating face of the connector, a plurality of terminal-receiving passages defined by wall means extending between said mating and terminating faces, and said wall means being of generally uniform thickness between the faces; and

a plurality of conductive terminals mounted in said terminal-receiving passages.

D1 2. The electrical connector of claim 1 wherein said wall means include outside walls.

Sub C1 3. The electrical connector of claim 1 wherein said molded plastic housing includes enlarged end portions at opposite ends of said elongated body portion, the body portion being narrower than the end portions.

D1 4. The electrical connector of claim 3 wherein said connector is a combination connector with said elongated body portion including a data section of the connector and at least one of said enlarged end portions including a power section of the connector.

5. The electrical connector of claim 4 wherein said terminals are signal terminals and said power section includes at least one power terminal mounted therein.

Sub a1

6. An electrical connector, comprising:

a molded plastic housing having an elongated body portion longitudinally extending between opposite end portions, a plurality of terminal-receiving passages extending transversely through the body portion, and the end portions being wider than the body portion therebetween; and

a plurality of conductive terminals mounted in said terminal-receiving passages.

Sub a2

7. The electrical connector of claim 6 wherein said passages are at least in part defined by outside walls of the elongated body portion, the walls being of generally uniform thickness throughout.

8. The electrical connector of claim 6 wherein said connector is a combination connector with said elongated body portion including a data section of the connector and at least one of said end portions including a power section of the connector.

B1

9. The electrical connector of claim 8 wherein said terminals are signal terminals and said power section includes at least one power terminal mounted therein.
